

PRESS RELEASE

A.ST.I.M. TMS selected for Amphibious Forces

Paris, 19 October 2022 - Thanks to the technical features of **SEAGUARDIAN® MK4 NSOF** version, A.ST.I.M. has been chosen to provide the TMS on board of the new Landing Craft LC23 Class and the new Fast Fighting Craft Combat Boat, the Naval Units are part of the important LHD Italian Program and will be used by the Amphibious Force.

Confirming the choices made by the Italian Armed Force for the "digitalization" of amphibious vehicles, SEAGUARDIAN® MK4 NSOF has also been selected for the retrofit of the GIS naval units that are in use at the Landing Craft Group of Brigata Marina San Marco.

"This success is another prove of the close and constant collaboration between ASTIM and the women and men of Amphibious Unit Brigata Marina San Marco" has declared Maurizio Minghelli CEO of ASTIM Company.

SEAGUARDIAN® MK4, from the **THERMONAV®** family, is the core product of A.ST.I.M and represents the new technological generation of tactical mission systems for naval units and for maritime security.

Headquartered in Ravenna, Italy, **A.ST.I.M.** is an Italian hi-tech solutions provider for industry, naval, security and defense market. It operates in the design and development of high tech technologies and systems as Combat Management Systems (CMS), Tactical Mission Systems (TMS), C4I solutions, Integrated Navigation Systems (iNAV/IBS) and special antennas for tactical radio data-link. A long history started more than 10 years ago and that led A.ST.I.M. to be a leader in the development of complex and high-tech systems for civil and military applications, where high operational capabilities are required.
